Project: Environmental Impact Statement Preparation Notice (EISPN) for the Pu'unani Subdivision Project at TMK 3-5-002:002 and 003 (por), Wailuku, Maui Hawaii

Dear Ms. Suyama,

Thank you for the opportunity to comment on this EISPN. We recommend that the Environmental Impact Statement (EIS) addresses the following:

Source development within the designated Iao aquifer is intended to replace the aging Wailuku Shaft 33 and redistribute pumpage within the aquifer and does not provide new source to meet additional demand. The proposed development is subject to the county's availability policy codified in Chapter 14.12 of the Maui County Code.

The proposed development is within the 2-year time of travel and 10-year time of travel capture zones/wellhead protection areas of DWS municipal wells as shown on the attached map. We recommend that the following design guidelines and best management practices be included in the EIS and adopted to address ground water protection:

Design Guidelines

1. Proposed development should be located at as far of a distance from the wellhead as possible.
2. Storm-water infiltration basins should be located outside the overlay district where feasible.
3. Active parks and schools should implement Integrated Pest Management.
4. Vegetative cover should be provided on all disturbed land areas, excluding fallow agricultural fields, not covered by paving, stone or other solid material. The maintenance or use of native climate-adapted plant materials with low water and nutrient requirements is encouraged.
