

STRATIGRAPHIC TRENCH 25 (ST-25)

Stratigraphic Trench 25 (ST-25) (440 x 100 x 140 cm) was located on a northeast/southwest axis (70°/250°). The surface of ST-25 contained sporadic sugar cane, along with scattered grass patches and previously disturbed top soil. ST-25 contained one stratigraphic layer (Figure 54 and Figure 55).

Layer I (0-140 cmbs) consisted of dark reddish brown (2.5YR 3/4) compacted and wet semi-plastic silty clay. No roots or stones were present throughout Layer I.

STRATIGRAPHIC TRENCH 26 (ST-26)

Stratigraphic Trench 26 (ST-26) (420 x 90 x 150 cm) was located on an east/west axis (100°/280°). The surface of ST-26 contained sporadic sugar cane, along with scattered grass patches and previously disturbed top soil. ST-26 contained one stratigraphic layer (Figure 56 and Figure 57).

Layer I (0-150 cmbs) consisted of dark reddish brown (5YR 3/4) compacted and wet semi-plastic silty clay. No roots or stones were present throughout Layer I.

STRATIGRAPHIC TRENCH 27 (ST-27)

Stratigraphic Trench 27 (ST-27) (410 x 90 x 80 cm) was located on an east/west axis (80°/260°). The surface of ST-27 contained sporadic sugar cane, along with scattered grass patches and previously disturbed top soil. ST-27 contained one stratigraphic layer (Figure 58 and Figure 59).

Layer I (0-150 cmbs) consisted of dark reddish brown (2.5YR 3/4) compacted and wet semi-plastic silty clay. Stones were present throughout Layer I, which ended the excavation early, due to encountered bedrock.
